Eric,

I forwarded your e-mails to Jennifer Sutter. I am headed into a meeting for the morning, and will not be able to pick this question up until later. I am not sure of Jennifer's schedule as she is not in yet.

Matt

Subject: OSM MW-22

Matt and Jim, I mis-interpreted Kristine's comments. She was thinking that the BL-MW-3 and BL-MW-4 wells would more representative of background groundwater conditions based on the lower levels of Mn detected in these wells. However, I question whether these wells were impacted by the blue lagoon waste disposal unit. She thinks they are upgradient of the waste area. I have no data other than Mn for these wells. A detemining factor would seem to be pH.

I would like to get this point resolved asap so I can send out the comments on the GW pathway outline.

Thanks for any assistance you can provide.

Eric
